1 Usage

1.1 Introduction

Selectable BUS block RAM for any FPGA target. Currently supports wishbone classic or AXI lite. This will create FPGA block RAM that is accessible via the selected bus.

1.2 Dependencies

The following are the dependencies of the cores.

- fusesoc 2.X
- iverilog (simulation)
- cocotb (simulation)

1.2.1 axi_lite_block_ram Dependencies

- dep
 - AFRL:utility:helper:1.0.0
 - AFRL:ram:dc_block_ram:1.0.0
 - AD:common:up_axi:1.0.0
- dep_tb
 - AFRL:simulation:clock_stimulator
 - AFRL:utility:sim_helper

1.2.2 wishbone_classic_block_ram Dependencies

- dep
 - AFRL:utility:helper:1.0.0
 - AFRL:ram:dc_block_ram:1.0.0
 - AFRL:bus:up_wishbone_classic:1.0.0
- dep_tb
 - AFRL:simulation:clock_stimulator
 - AFRL:utility:sim_helper

1.3 In a Project

Connect the device using the bus selected, see 5 for details

2 Architecture

There are two bus block RAM cores. The AXI lite block RAM and the Wishbone Classic block RAM.

AXI lite block RAM is made up of the following modules.

- **up_axi** Convert AXI lite to the Analog Devices uP BUS. (see core for documentation).
- **dc_block_ram** Provides a dual clock block RAM. (see core for documentation).

This core has 1 always blocks that are sensitive to the positive clock edge.

- **register request to the acknowledge** Takes the request and registers to the acknowledge. All reads and writes will produce something.

Please see 5 for more information.

Wishbone Classic block RAM is made up of the following modules.

- **up_wishbone_classic** Convert Wishbone Classic to the Analog Devices uP BUS. (see core for documentation).
- **dc_block_ram** Provides a dual clock block RAM. (see core for documentation).

This core has 1 always blocks that are sensitive to the positive clock edge.

- **register request to the acknowledge** Takes the request and registers to the acknowledge. All reads and writes will produce something.

Please see 5 for more information.

3 Building

The BUS block RAM cores are written in Verilog 2001. They should synthesize in any modern FPGA software. The core comes as a fusesoc packaged core and can be included in any other core. Be sure to make sure you have met the dependencies listed in the previous section.

3.1 fusesoc

Fusesoc is a system for building FPGA software without relying on the internal project management of the tool. Avoiding vendor lock in to Vivado or Quartus. These cores, when included in a project, can be easily integrated and targets created based upon the end developer needs. The core by itself is not a part of a system and should be integrated into a fusesoc based system. Simulations are setup to use fusesoc and are a part of its targets.

3.2 Source Files

3.2.1 axi_lite_block_ram File List

- src
 - src/axi_lite_block_ram.v
- tb
 - 'tb/tb_axi_lite_slave.v': 'file_type': 'verilogSource'
- tb_cocotb
 - 'tb/tb_axi_lite_cocotb.py': 'file_type': 'user', 'copyto': '.'
 - 'tb/tb_axi_lite_cocotb.v': 'file_type': 'verilogSource'

3.2.2 wishbone_classic_block_ram File List

- src
 - src/wishbone_classic_block_ram.v
- tb
 - 'tb/tb_wishbone_slave.v': 'file_type': 'verilogSource'
- tb_cocotb
 - 'tb/tb_wishbone_cocotb.py': 'file_type': 'user', 'copyto': '.'
 - 'tb/tb_wishbone_cocotb.v': 'file_type': 'verilogSource'

3.3 Targets

3.3.1 axi_lite_block_ram Targets

- default
 - Info: Default for IP intergration.

- sim

Info: Simple read/write register check.

- sim_cocotb

Info: Cocotb unit tests

3.3.2 wishbone_classic_block_ram Targets

- default

Info: Default for IP intergration.

- sim

Info: Default for IP intergration.

- sim_cocotb

Info: Cocotb unit tests

3.4 Directory Guide

Below highlights important folders from the root of the directory.

1. **docs** Contains all documentation related to this project.
 - **manual** Contains user manual and github page that are generated from the latex sources.
2. **src** Contains source files for the core
3. **tb** Contains test bench files for iverilog and cocotb
 - **cocotb** testbench files

4 Simulation

There are a few different simulations that can be run for this core. All currently use iVerilog (icarus) to run. The first is iverilog, which uses verilog only for the simulations. The other is cocotb. This does a unit test approach to the testing and gives a list of tests that pass or fail.

4.1 iverilog

All simulation targets that do NOT have cocotb in the name use a verilog test bench with verilog stimulus components. For AXI Lite/Wishbone these are very simple read/writes without data verification.

4.2 cocotb

To use the cocotb tests you must install the following python libraries. Only AXI lite is supported for cocotb sims at the moment.

```
$ pip install cocotb
$ pip install cocotbext-axi
```

Then you must use the cocotb sim target. In this case it is sim_cocotb. This target can be run with various parameters.

```
$ fusesoc run --target sim_cocotb AFRL:ram:axi_lite_block_ram:1.0.0 --BUS_WIDTH
```

5 Module Documentation

There are two different BUS block RAM modules that can be used in a project.

- **axi_lite_block_ram** AXI lite block RAM
- **wishbone_classic_block_ram** Wishbone Classic block RAM
- **tb_axi_lite_cocotb-py** Python axi lite cocotb test bench
- **tb_axi_lite_cocotb-v** Verilog axi lite cocotb test bench
- **tb_axi_lite_slave-v** Verilog test bench for axi lite.
- **tb_wishbone_cocotb-py** Python wishbone cocotb test bench
- **tb_wishbone_cocotb-v** Verilog wishbone cocotb test bench
- **tb_wishbone_slave-v** Verilog test bench for wishbone.

The next sections document the module.

    =
    ""
) ( input aclk, input arstn, input s_axi_awvalid, input [ADDRESS_WIDTH-1:0]

```

axi lite block ram

Parameters

ADDRESS_WIDTH parameter	Width of the axi address bus in bits.
BUS_WIDTH parameter	Bus width for data paths in bytes.
DEPTH parameter	Depth of the RAM in terms of data width words.
RAM_TYPE parameter	Used to set the ram_style attribute.
HEX_FILE parameter	Hex file to write to RAM.

Ports

aclk	Clock for all devices in the core
arstn	Negative reset
s_axi_awvalid	Axi Lite aw valid
s_axi_awaddr	Axi Lite aw addr
s_axi_awprot	Axi Lite aw prot
s_axi_awready	Axi Lite aw ready
s_axi_wvalid	Axi Lite w valid
s_axi_wdata	Axi Lite w data
s_axi_wstrb	Axi Lite w strb
s_axi_wready	Axi Lite w ready
s_axi_bvalid	Axi Lite b valid
s_axi_bresp	Axi Lite b resp
s_axi_bready	Axi Lite b ready

FUNCTIONS

random_bool

```
def random_bool()
```

Return a infinite cycle of random bools

Returns: List

start_clock

```
def start_clock(  
    dut  
)
```

Start the simulation clock generator.

Parameters

dut Device under test passed from cocotb test function

reset_dut

```
async def reset_dut(  
    dut  
)
```

Cocotb coroutine for resets, used with await to make sure system is reset.

single_word

```
@cocotb.test()  
async def single_word(  
    dut  
)
```

Coroutine that is identified as a test routine. This routine tests for writing a single word, and then reading a single word.

Parameters

dut Device under test passed from cocotb.

bulk_test

```
@cocotb.test()  
async def bulk_test(  
    dut  
)
```

Coroutine that is identified as a test routine. This routine tests streaming data to the axi lite device. Parameters: dut - Device under test passed from cocotb.

random_ready_bulk

```
@cocotb.test()  
async def random_ready_bulk(  
    dut  
)
```

Coroutine that is identified as a test routine. This routine tests streaming data to the axi lite

device with random ready. Parameters: dut - Device under test passed from cocotb.

in_reset

```
@cocotb.test()
async def in_reset(
    dut
)
```

Coroutine that is identified as a test routine. This routine tests if device stays in unready state when in reset.

Parameters

dut Device under test passed from cocotb.

no_clock

```
@cocotb.test()
async def no_clock(
    dut
)
```

Coroutine that is identified as a test routine. This routine tests if no ready when clock is lost and device is left in reset.

Parameters

dut Device under test passed from cocotb.

FUNCTIONS

random_bool

```
def random_bool()
```

Return a infinite cycle of random bools

Returns: List

start_clock

```
def start_clock(  
    dut  
)
```

Start the simulation clock generator.

Parameters

dut Device under test passed from cocotb test function

reset_dut

```
async def reset_dut(  
    dut  
)
```

Cocotb coroutine for resets, used with await to make sure system is reset.

single_word

```
@cocotb.test()  
async def single_word(  
    dut  
)
```

Coroutine that is identified as a test routine. This routine tests for writing a single word, and then reading a single word.

Parameters

dut Device under test passed from cocotb.

full_empty

Coroutine that is identified as a test routine. This routine tests for writing till the fifo is full, # Then reading from the full FIFO. # # Parameters: # dut - Device under test passed from cocotb. @cocotb.test() async def full_empty(dut):

random_ready

Coroutine that is identified as a test routine. This routine tests for randomized ready from the sink. # # Parameters: # dut - Device under test passed from cocotb. @cocotb.test() async def random_ready(dut):

in_reset

```
@cocotb.test()  
async def in_reset(  
    dut  
)
```

Coroutine that is identified as a test routine. This routine tests if device stays in unready state when in reset.

Parameters

dut Device under test passed from cocotb.

no_clock

```
@cocotb.test()
async def no_clock(
    dut
)
```

Coroutine that is identified as a test routine. This routine tests if no ready when clock is lost and device is left in reset.

Parameters

dut Device under test passed from cocotb.

tb_cocotb

```
module tb_cocotb #(
    parameter
    ADDRESS_WIDTH
    =
    32,
    parameter
    BUS_WIDTH
    =
    4,
    parameter
    DEPTH
```

```

    =
    512,
    parameter
    RAM_TYPE
    =
    "block",
    parameter
    HEX_FILE
    =
    ""
) ( input clk, input rst, input s_wb_cyc, input s_wb_stb, input s_wb_we, input s_wb_addr, input s_wb_data_i, input s_wb_sel, input s_wb_bte, input s_wb_cti, input s_wb_ack, input s_wb_data_o, input s_wb_err )

```

Test bench for wishbone.

Parameters

ADDRESS_WIDTH parameter	Width of the axi address bus in bits.
BUS_WIDTH parameter	Bus width for data paths in bytes.
DEPTH parameter	Depth of the RAM in terms of data width words.
RAM_TYPE parameter	Used to set the ram_style attribute.
HEX_FILE parameter	Hex file to write to RAM.

Ports

clk	Clock for all devices in the core
rst	Positive reset
s_wb_cyc	Bus Cycle in process
s_wb_stb	Valid data transfer cycle
s_wb_we	Active High write, low read
s_wb_addr	Bus address
s_wb_data_i	Input data
s_wb_sel	Device Select
s_wb_bte	Burst Type Extension
s_wb_cti	Cycle Type
s_wb_ack	Bus transaction terminated
s_wb_data_o	Output data
s_wb_err	Active high when a bus error is present

INSTANTIATED MODULES

dut

```

wishbone_classic_block_ram #(
    ADDRESS_WIDTH(ADDRESS_WIDTH),
    .
    .

```

```

    BUS_WIDTH(BUS_WIDTH),
    DEPTH(DEPTH),
    RAM_TYPE(RAM_TYPE),
    HEX_FILE(HEX_FILE)
) dut ( .clk(clk), .rst(rst), .s_wb_cyc(s_wb_cyc), .s_wb_stb(s_wb_stb), .s_w

```

Device under test, wishbone_classic_block_ram
